SUMMARY

Senior Software Engineer with **4+ years of experience** designing resilient, high-throughput systems at scale. Currently serving as **Tech Lead**, heading a lean team of engineers on a product with **1M+ DAU** and **\$100k daily revenue**, driving architecture decisions, production stability, and measurable business impact.

WORK EXPERIENCE

Senior Software Engineer

August, 2025 – Present

PlaySimple Games(Google Launchpad Startup, acquired for 360 Million \$)

Bangalore, India

- Serving as **Tech Lead** for a **live ops casual mobile game** with **1M+ DAU** and **\$100K daily revenue** – leading a lean team of engineers across code architecture, sprint execution, roadmap planning. Store Links: [Android](#), [iOS](#)
- Designed a **high-scale real-time leaderboard** handling **1M+ concurrent players** using **C#, Golang, Redis**, boosting engagement by **10%**.
- Improved **engineering efficiency by 20%** by pioneering a structured **AI workflow** using Cursor Rules, Skills and MCPs. The workflow covers steps from Requirement gathering → Feature Design Documentation → Feature development → Unit testing → Self code review.
- Built an **automated CI/CD failure analysis system**. AI models analyses failed pipelines and post root cause with solution to Slack, eliminating manual log triage.
- Led **feature design review meetings**, driving architectural decisions for scalable, high-performance systems. **Conducted 200+ code reviews** to maintain clean, scalable, modular production code.
- Owned production stability, **above 99% crash-free sessions, ANR rate below 1%, p50 App launch time under 7 seconds, server health**, achieved through regular profiling through *Memory Profiler, Unity Profiler, Native Android Profiler, Frame Debugger* and monitoring on *Firebase, Play Console, Embrace, Datadog*.

Software Engineer

August, 2023 – July, 2025

PlaySimple Games(Google Launchpad Startup, acquired for 360 Million \$)

Bangalore, India

- Led end-to-end full-stack development and global launch of a Match-Three mobile game, [Tile Empire](#).
 - Build the client game using **Unity, C#, Android(Java)**.
 - Developed game server in **Golang** and deployed using **DigitalOcean**.
 - Setup the player databases in **ScyllaDB** & leaderboards in **Redis**
 - Integrated various SDKs for Analytics, Crashlytics, Advertisement, IAPs.
- Built **CI/CD pipelines** for Remote Content Delivery, SDK integrations, Mobile Application Builds (**Android, iOS**), Release processes, micro-service deployments **using Jenkins**.
- Handled **Data Compliance laws** (GDPR, CCPA, dpdp etc.) in the product and Integrated an **enterprise-grade authentication** system facilitating unified user profiles, secure cross-device progress retention.
- Owned end-to-end development and shipped game features from requirement gathering to release, a few features : **Quest Center, Player Profile System, Long Term Progression Meta, Personalised Puzzle Difficulty, Designer-configurable Tutorial System, Events Infrastructure, PowerUps, IAP features** etc. positively impacting player engagement and LTV.

Associate Software Engineer

PlaySimple Games(Google Launchpad Startup, acquired for 360 Million \$)

August, 2022 – July, 2023

Bangalore, India

- Designed and developed the **core Gameplay logic** of a Match Three Game using a **graph-based data structure** to model tile relationships without expensive physics operations. Shipped the MVP in 2 months settings fastest MVP launch record across the company.
- Developed a **modular Localization package** adapted across multiple games, supporting **15+ languages**, contributing to **3x user acquisition growth**.
- Developed QA tools, UI/UX tools for in-Unity designing and other editor scripts for optimizing workflows and processes.
- Reduced **p50 launch time by 200ms** and **p99 by 2 seconds** by optimising critical API calls on game launch and lazy loading.
- Implemented gameplay features following **SOLID, DRY** principles using design patterns such as **Observer, Strategy, Facade, Object Pooling, Factory**, enhancing modularity and maintainability.

Software Engineer Intern

PlaySimple Games(Google Launchpad Startup)

August, 2021 – July, 2022

Bangalore, India

- Worked on developing features, minigames, backend APIs and tools. Owned multiple features from spec design stage, tech architecture design, cost allocation to execution and rapid deployment. Involved in programming gameplay, player behavior simulations, developing features and APIs, optimizations in an agile development environment.
- Built **Android notification infrastructure** from scratch, driving re-engagement and improving upon later cohort retention.

SKILLS

Languages: C#, C++, Java, Golang, Python

Technologies : Unity Game Engine, Android, iOS

Databases & Storage: ScyllaDB (NoSQL), Redis, SQL

Others: Jenkins, DigitalOcean, Git, Firebase, Datadog, Embrace, Distributed Systems, REST APIs, gRPCs, Event-Driven Architecture, Microservices

Software Fundamentals : Computer Networks, DBMS, Data Structures & Algorithms, Software Design Patterns

AI & Developer Tooling: Cursor, MCP, Prompt Engineering, LLM Integration

Problem Solving: Leetcode(**Top 8% WorldWide**) Codeforces(**Rated : Expert, Top 20% WorldWide**)

Google Kickstart(**Ranked under Top 10% WorldWide**)

EDUCATION

KIET Group Of Institutions, AKTU

Bachelor of Technology in Information Technology

2018-2022

CGPA: 8.33/10
